VARANASI

Computer Science (New) (083)

Project On

Python and MySQL

(Book Shop Management System)

Session 2020-21

under the guidance of: -

Ms. Ruhi Seth

Made by:-

Tanishq Singh

(XII-C,)

Swarit Jain

(XII-A,)

Acknowledgement

I would like to convey my thanks to ***Ms. Ruhi Seth***, my ***COMPUTER SCIENCE*** teacher, Sunbeam School, Varuna for her immense help and guidance in the completion of my project. It is only due to her effort that my project completed successfully. This report is submitted as a part of practical examination included in curriculum of CBSE for ***AISSE*** (All India Senior Secondary Examination) to be held in the year 2020-21.

Estd. 1972

SUNBEAM SCHOOL VARUNA

Certificate

This is to certify that **Tanishq Singh (Class 12-C)** of Sunbeam School Varuna, Varanasi has completed this project under my supervision. He took much interest and shown utmost sincerity in completion of this project. He had successfully completed the project work in ‘Computer Science (083)’ up to my satisfaction.

(P.G.T. Computer Science)

What is Python?

Python is a popular programming language. It was created by Guido van Rossum, and released in 1991.

It is used for:

- Web development (Server-side),
- Software development,
- Mathematics,
- System scripting

I) What can Python do?

- Python can be used on a server to create web applications.
- Python can be used alongside software to create workflows.
- Python can connect to database systems. It can also read and modify files.
- Python can be used to handle big data and perform complex mathematics.
- Python can be used for rapid prototyping, or for production-ready software development.

II) Why Python?

- Python works on different platforms (Windows, Mac, Linux, Raspberry Pi, etc).
- Python has a simple syntax similar to the English language.
- Python runs on an interpreter system, meaning that code can be executed as soon as it is written. This means that prototyping can be very quick.

- Python can be treated in a procedural way, an object-oriented way or a functional way.
- Python has syntax that allows developers to write programs with fewer lines than some other programming languages.

III) Good to know

- The most recent major version of Python is Python 3. However, Python 2, although not being updated with anything other than security updates, is still quite popular.
- Python comes with a pre-built text editor. It is also possible to write Python in an Integrated Development Environment, such as Thonny, Pycharm, NetBeans or Eclipse which are particularly useful when managing larger collections of Python files.

IV) Python Syntax compared to other programming languages

- Python was designed for readability, and has some similarities to the English language with influence from mathematics.
- Python uses new lines to complete a command, as opposed to other programming languages which often use semicolons or parentheses.
- Python relies on indentation, using whitespace, to define scope; such as the scope of loops, functions and classes. Other programming languages often use curly-brackets for this purpose.

What is MySQL ?

- MySQL is a database system used for developing web-based software applications.
- MySQL used for both small and large applications.
- MySQL is a relational database management system (*RDBMS*).
- MySQL is fast, reliable, and flexible and easy to use.
- MySQL supports standard SQL (*Structured Query Language*).
- MySQL is free to download and use.
- MySQL was developed by Michael Widenius and David Axmark in 1994.
- MySQL is presently developed, distributed, and supported by Oracle Corporation.
- MySQL Written in C, C++.

Main Features of MySQL

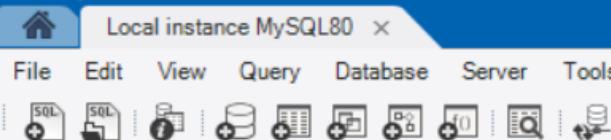

- MySQL server design is multi-layered with independent modules.
- MySQL is fully multithreaded by using kernel threads. It can handle multiple CPUs if they are available.
- MySQL provides transactional and non-transactional storage engines.
- MySQL has a high-speed thread-based memory allocation system.

- MySQL Handles large databases.
- MySQL Server works in client/server or embedded systems.
- MySQL Works on many different platforms.
- MySQL supports in memory heap table

Who Uses MySQL

- Some of the most famous websites like Facebook, Wikipedia, Google (not for search), YouTube, Flickr.
- Content Management Systems (CMS) like WordPress, Drupal, Joomla, phpBB etc.
- A large number of web developers worldwide are using MySQL to develop web applications.

Email Sent on Updating Order Address

The screenshot shows a Gmail inbox interface. The top bar displays the title "Information of Order Update on S & T Book Shop Management System" and the URL "mail.google.com/mail/u/0/?hl=en_GB#inbox/ FMfcgxwKjTPhtksRFmHkktISPJVisnL". Below the bar are several tabs and icons for YouTube, Unacademy, Smartkeeda, Python File Handling, and BANKING CHRONI... The main area shows an email from "snt.bookshop@gmail.com" with the subject "Information of Order Update on S & T Book Shop Management System". The email body contains the message: "Your Order has been updated successfully. New Location of the order is Flat No.89, Shree Ram Apartments, Sigra, Varanasi, 221002, Varanasi, Uttar Pradesh :)" and two buttons for "Reply" and "Forward". The left sidebar lists "Compose", "Inbox" (with 2 notifications), "Starred", "Snoozed", "Sent", "Drafts", "STUDY MATERIALS", "More", "Meet", and "New meeting". The top right corner shows a gear icon, a question mark, and other settings.

Do you want to return or replace any of the above orders (y/n) y
Enter the order ID for which you want to return or replace: 5
You have chosen order ID: 5
Few details of your order are as follows:
```

Book name: the namesake

Quantity: 2

Order date: 2020-11-02 15:30:11

By SNT.bookshop Return and Replace policies, you have below two options

1. Return

2. Replace

Enter the option number that you want to select: 1

You have entered under our Return policy

Are you sure you want to return this order? (y/n) y

Processing the Return

An email with all details is sent to you on your E-mail Address swaritjain123@gmail.com

Successfully requested for return to your order.

Our courier boy will come within the next day to collect the package after verifying its condition, be ready with the packed book

Money will be refund to your account within 2-3 days

Go Back to Main Menu? (y -> Yes, n -> No and Logout) y

Note: - Orders Shown here are test orders of 'admin' user which were inserted after the testuser (sjain12sw) placed his/her order. Two Orders displayed above are used one by one for return and replacement.

P.T.O.

Email sent on Returning the order

The screenshot shows a Gmail inbox interface. On the left, there's a sidebar with icons for Compose, Inbox (which is selected), Starred, Snoozed, Sent, Drafts, and More. Below these are sections for Meet (New meeting, Join a meeting) and Hangouts. The main area displays an email message from "snt.bookshop@gmail.com" with the subject "Information of Returning Order on S & T Bookshop". The message body contains details about the return request, including the book name ("The Namesake"), order ID (5), recipient's name ("Swarit"), address ("C-121, SBI Colony, Main Branch Campus, Opposite Kachahari"), district ("Varanasi"), city ("Varanasi"), state ("Uttar Pradesh"), pincode ("221002"), country ("India"), phone number ("8004124465"), pieces ordered ("2"), and order date and time ("2020-11-02 15:30:11"). At the bottom of the email view are "Reply" and "Forward" buttons. To the right of the email is a user profile for "Swarit Jain" with the email "swaritjain123@gmail.com". The profile includes a photo of a circuit board, a "Manage your Google Account" button, an "Add another account" button, and a "Sign out" button. At the very bottom of the page are links for "Privacy Policy" and "Terms of Service".
